DOKUMENTACJA TECHNICZNA

ver. 0.9 May 2008

The Cyclop typeface was designed in the 1920s at the workshop of Warsaw type foundry "Odlewnia Czcionek J. Idzkowski i S-ka". This sans serif typeface has a highly modulated stroke so it has high typographic contrast. The vertical stems are much heavier than horizontal ones. Most characters have thin rectangles as additional counters giving the unique shape of the characters.

The lead types of Cyclop typeface were produced in slanted variant at sizes 8-48 pt. It was heavily used for heads in newspapers and accidents prints. Typesetters used Cyclop in the inter-war period, during the occupation in the underground press. The typeface was used until the beginnings of the offset print and computer typesetting era. Nowadays it is hard to find the metal types of this typeface.

The font was generated using the Metatype1 package. Then the original set of characters was completed by adding the full set of accented letters and characters of the modern Latin alphabets (including Vietnamese).

The upright variant was generated and it was more complicated task than it appeared at the beginning. 11 upright letters of the Cyclop typeface were presented in the book by Filip Trzaska, "Podstawy techniki wydawniczej" ("Foundation of the publishing technology"), Warsaw 1967. But even the author of the book does not know what was the source of the presented examples.

The fonts are distributed in the Type1 and OpenType formats along with the files necessary for use these fonts in TeX and LaTeX including encoding definition files: T1 (ec), T5 (Vietnamese), OT4, QX, texnansi and nonstandard ones (IL2 for Czech fonts).

W latach dwudziestych XX wieku, w pracowni projektowej warszawskiej „Odlewni Czcionek J. Idzkowski i S-ka” opracowano krój pisma drukarskiego o nazwie Cyklop. Dwoelementowe, bezszeryfowe czcionki charakteryzują się bardzo dużym kontrastem. Stemy pionowe są znacznie grubsze od stemów poziomych. Wewnętrzne oczka liter mają w większości kształt wydłużonego prostokąta. Dzięki temu znaki mają niepowtarzalny kształt.

Cyklop, w postaci czcionek ołowianych, produkowany był w odmianie kursywnej w rozmiarach 8-48 pt. Używany był bardzo intensywnie w tytułach gazetowych i drukach akcydensowych. Zecerzy sięgali po niego w okresie międzywojennym, w okresie okupacji w prasie podziemnej. Stosowany był aż do początków druku offsetowego i składu komputerowego. Obecnie trudno już go znaleźć w formie metalowych czcionek.

Fonty wygenerowałem korzystając z pakietu Metatype1. Uzupełniłem je o kompletny zestaw akcentowanych liter oraz znaki, których brak w oryginalnym zestawie, uwzględniający współczesne alfabety łaćńskie (w tym wietnamski).

Wygenerowałem również odmianę prostą, co okazało się zadaniem bardziej skomplikowanym, niż się wcześniej wydawało. W książce Filipa Trzaski, Podstawy techniki wydawniczej (Warszawa 1967, Wydawn. CRZZ), pokazano 11 liter prostego Cyklopa. Jednak nawet F. Trzaska nie pamięta skąd się te przykładowe litery wzięły.

Fonty udostępniono w formatach Type 1 oraz OpenType. Dla wykorzystania w systemie TeX przygotowano odpowiednie pliki przekodowań: T1 (ec), T5 (wietnamski), OT4, QX, texnansi oraz niestandardowych (IL2 dla fontów czeskich), jak też wsparcie w postaci odpowiednich makr i plików definiujących fonty dla LaTeX-a.
